

- **More control over web content – globally**
- **Control access to HTTP and HTTPS web sites**
- **Cost-effective web filtering**
- **Centralized policy enforcement and notification**
- **Flexible custom policies**
- **Passthrough authentication**
- **Centralized logging and reporting out of the box**
- **Daily incremental database updates**

Earth-friendly technology

Boost Productivity, Reduce Liabilities, and Block Web Threats

WebBlocker is an integrated security subscription that enhances the built-in, proactive zero day protection of the Firebox® X. It lets you manage web access and content to give you control over your users' web surfing. By using the continually updated SurfControl® database, WebBlocker blocks malicious sites to keep your network protected from risky web content such as spyware, and pharming and phishing sites. It can block access to web pages delivering streaming media, Peer-to-Peer (P2P), Instant Messaging (IM), and webmail capabilities. You can also use up to 54 web site categories to block content inappropriate in the workplace. WebBlocker conserves your network bandwidth, helps prevent legal liability, increases employee productivity, and protects against malicious attacks from rogue web sites.

More Control Over Web Content – Globally

With WebBlocker, you have access to an automatically updated database containing over 14.4 million global sites – including web sites in English, German, Spanish, French, Italian, Dutch, Japanese, and Traditional and Simplified Chinese. You can quickly select your web security policy from 54 content-type category filters. Allow or block access to entire web site categories with a simple mouse click. Easily create exception lists for trusted sites, or blacklist specific URLs or IP addresses.

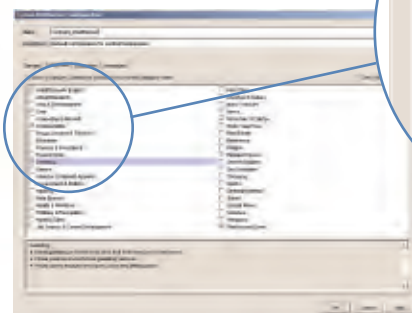

Cost-Effective Web Filtering

Priced per appliance instead of per user, one WebBlocker subscription provides network-wide protection for all users configured behind your Firebox X. And because it's fully integrated with the Firebox X, there is no additional hardware to buy.

Centralized Policy Enforcement and Notification

WebBlocker's quick set-up wizard and object-based configuration tool make it easy to implement your web usage policies. Customizable notifications keep users informed and help them understand why certain content is restricted. On Firebox X Peak™ and Core™ appliances, and Firebox X Edge appliances on a Peak or Core network, WebBlocker is managed using the powerful WatchGuard System Manager (WSM). Stand-alone Firebox X Edge appliances use an intuitive web-based UI.

Flexible Custom Policies

WatchGuard System Manager view of WebBlocker

WebBlocker enables you to configure:

- Up to 54 web site categories to easily control your users' web surfing
- Web access by users, groups, and domains, and by time of day,* department requirements, or employee need

Centralized Logging and Reporting Out of the Box

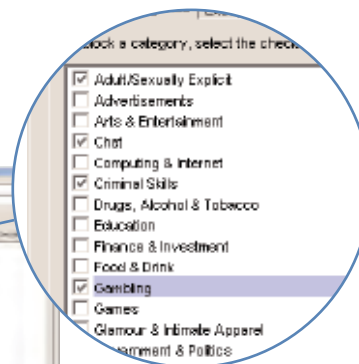

With WebBlocker, you'll have the ability to track where your users are going, and when. By generating graphical reports of web access, attempted policy violations and Internet usage by time of day,* you'll get the data you need to make security policy and network bandwidth decisions. And unlike other solutions, these capabilities are all included with your Firebox X purchase.

Daily Incremental Database Updates

The SurfControl database is one of the world's largest global databases of web sites, updated daily to give you the most current and accurate protection available. Simply schedule your updates, and automatically receive the next incremental database changes.

*Scheduling feature available on Firebox X Peak and Core.

WebBlocker includes 54 content-type filters for flexible control. Access can be assigned by user, group, domain, department requirement, or employee need.

Security Subscriptions Boost Protection

To enhance the built-in zero day attack prevention of the Firebox® X, you can add security subscriptions for even greater levels of protection. Subscriptions are easy to enable on your Firebox X using a simple license key. That's it – no extra hardware to buy! Along with WebBlocker, our suite of security subscriptions includes:

- **Gateway AntiVirus/Intrusion Prevention Service with anti-spyware:** Powerful signature-based scanning at the gateway stops known viruses, spyware, trojans, and other malware before they can enter your network.
- **spamBlocker with virus outbreak detection:** The best in the industry at distinguishing legitimate communications from spam and virus outbreaks in real-time, blocking up to 97% of unwanted emails. Blocks spam regardless of the language, format, or content of the message.

These fully integrated security subscriptions are easy to deploy and manage on the Firebox X. Each is priced per appliance rather than per user, so one subscription provides network-wide protection for all users configured behind your Firebox X.

FREE 30-day trials

Get free 30-day trials of **Gateway AntiVirus/Intrusion Prevention Service, spamBlocker, and WebBlocker** for your Firebox X Peak, Core, or Edge. Contact your reseller for details.
